

**ABSTRACT**

The invention concerns a method of communicating

- 5 between an access point (20) of a short range rf network and a user terminal (10) of the short range rf network. The method comprises using a first short range rf transceiver (104) at the access point for access communication with a user terminal (10) for communicating information relating to
- 10 establishment of a connection with the user terminal (10), and using a second short range rf transceiver (106) at the access point for user data communication for communicating user data with the user terminal.
